The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1651

Status of the Claims

Claims 1-37 have been presented for examination.

The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 1651.

Election/Restrictions

Applicant's election with traverse of Group I, claims 1-10, 22, 36 and 37 in Paper No. 10, filed 01 November 2002 is acknowledged. The traversal is on the ground(s) that there is no burden between Groups I and II. It is believed that the restriction of 02 October 2002 was incorrectly presented. In view of the newly presented restriction, the election is rendered moot.

Restriction to one of the following inventions is now required under 35 U.S.C. 121:

- Claims 1-19, drawn to a multistep method of purifying human acid α-glucosidase
 (including heterologously produced in milk), classified in class 435, subclass 201.
- II. Claims 20-25 and 27-28, drawn to human acid α-glucosidase and a method of making a medicament therefrom (by mixing), classified in class 435, subclass 201 and class 424, subclass 94.61.
- III. Claim 26, drawn to method of treating human acid α -glucosidase deficiency, classified in class 424, subclass 94.61.
- IV. Claims 29-35, drawn to a single step method of purifying a heterologous protein, classified in class 435, subclass 183 and class 530, subclass 402+.

Application/Control Number: 09/886,477

Art Unit: 1651

V. Claims 36-37, drawn to a single step method of purifying a human acid α -glucosidase, classified in class 435, subclass 201.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to substantially different processes: a multistep purification procedure for human acid α -glucosidase, a single step procedure for purifying a host of possible proteins, and a single step procedure for purifying human acid α -glucosidase respectively. The processes are substantially distinct from each other.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product could be made by any of a number of known methodologies including but not limited to steps set forth in Belen'kil et al. (1974).

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product could be used to degrade amylose in waste products or possibly even in wallpaper stripper.

Art Unit: 1651

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search required for one Group is not required for another Group particularly in the non-patent literature (when co-classified), restriction for examination purposes as indicated is proper.

Species

Claims 29 is generic to a plurality of disclosed patentably distinct species comprising vast numbers of heterologous proteins especially those set forth in claim 34. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of protein, even though this requirement is traversed if Group IV is elected.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1651

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jon P Weber, Ph.D. whose telephone number is 703-308-4015. The examiner can normally be reached on daily, off 1st Fri, 9/5/4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Wityshyn can be reached on 703-308-4743. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9306 for regular communications and 703-872-9307 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 7,03/3,08/0196.
